

# PRODUCT INFORMATION

HOW TO KEEP YOUR FLOORING LOOKING GREAT FOR GENERATIONS TO COME

## EASY FLOOR MAINTENANCE

### OPTI-SET

Special cleaning set for all smooth timber, vinyl, tiled and natural stone floors

- > **Telescopic handle** – for comfortable handling
- > **Dust-mop** – easy to use, for picking up dust on all wooden floors
- > **Micro-mop plus** – for damp mopping the floor with Osmo Wash and Care
- > **Active fibre cloth** – for simple application of Osmo Liquid Wax Cleaner on all oiled/waxed wooden floors

## REGULAR DAMP MOPPING

### WASH AND CARE

Natural cleaning and maintenance concentrate for floors – for regular cleaning and care

## OCCASIONAL INTENSIVE MAINTENANCE

### LIQUID WAX CLEANER

Cleaning and refreshing in one – the specially made maintenance product for oiled and waxed floors!

## MAINTENANCE AND PROTECTIVE SURFACE RENEWAL

### POLYX®-OIL

To retain the original surface properties over years, worn areas of the floor need to be renewed with one of the Osmo Polyx®-Oils.

## MAINTENANCE INSTRUCTIONS

FOR WOOD AND CORK FLOORS  
WITH OSMO HARDWAX-OIL FINISH

## IN DOMESTIC AREAS

Surfaces treated with Polyx®-Oil are easy to maintain. The regular cleaning, such as vacuuming or damp mopping, is comparable to that of tiles or natural stone floors.

- > **Dry cleaning:** For day to day cleaning you should use either a broom, a vacuum cleaner or the Osmo Opti-Set, using the green dust mop, to clean the surface.
- > **Regular damp mopping:** The Osmo Wash and Care concentrate brilliantly removes most day to day stains from your wooden floor. Osmo Wash and Care can be diluted to suit the level of soiling on the surface and applied using a damp Micro mop from the Osmo Opti-Set.  
The Oils that are contained in Osmo Wash and Care help to regenerate the wood surface.
- > **Periodical refreshing and intensive cleaning:**  
*To refresh* dull looking floor surfaces the Osmo Liquid Wax Cleaner has proven to be ideal, simply apply a thin layer of Osmo Liquid Wax Cleaner on an already, with Osmo Wash and Care, cleaned surface.  
The Active Fibre Cloth which is contained in the Osmo Opti-Set, or the Osmo FloorXcenter, are optimal for the thin application.  
For white finished floors Osmo also offers a Liquid Wax Cleaner in white (3087).  
*To clean* heavily soiled surfaces Osmo Liquid Wax Cleaner should be applied in small amounts directly to the effected area.
- > **Protective surface renewal:** To retain the original surface properties over years you must renew the worn surface areas using various Osmo Polyx®-Oil products (appropriate to the original finish).  
First clean the floor surface thoroughly, as above, allow to dry thoroughly and then apply a very thin coat of Polyx®-Oil.

## IN PUBLIC AREAS

Generally the cleaning techniques for public areas are the same as for private although the frequency of cleaning must be increased appropriately to meet demands.

- > **Mopping:** High frequency areas need to be damp mopped daily. Only Osmo Wash and Care should be used for this purpose (no aggressive cleaning materials).
- > **Intensive cleaning:** The wooden floor surface should be treated on a regular basis with Osmo Liquid Wax Cleaner.  
In bars and restaurants this can be necessary up to once a week.  
*For larger floor surfaces it is recommended that a single disc machine be used.*
- > Both Osmo Wash and Care and the Osmo Liquid Wax Cleaner can be used with a pad.
- > After using a machine you must immediately remove the leftover dirt from the surface using a lint free cotton cloth.
- > **Protective surface renewal:** To retain the original surface properties over years you must renew the worn surface areas using various Osmo Polyx®-Oil products (appropriate to the original finish).  
First clean the floor surface thoroughly, as above, allow to dry thoroughly and then apply a very thin coat of Polyx®-Oil.
